Books

Papers

[64] There are only finitely many finite distance-transitive graphs of given valency greater than two, *Combinatorica* **2** (1982), 9–13.

[144] (with D. Ghinelli) Tubes of even order and flat $\pi C_2$ geometries, Geometriae Dedicata 55 (1995), 265–278.

Sequences realized by oligomorphic permutation groups, *Journal of Integer Sequences* **3** (2000), article 00.1.5.

Permutation groups whose non-identity elements have $k$ fixed points, *J. Group Theory* **4** (2001), 45–51.

[197] (with S. Majid) Braided line and counting fixed points of \( GL(d, \mathbb{F}_q) \), Communications in Algebra 31 (2003), 2003–2013.

[204] (with S. Majid) Braided line and counting fixed points of \( GL(d, \mathbb{F}_q) \), Communications in Algebra 31 (2003), 2003–2013.

[210] The random graph has the strong small index property, Discrete Math. 291 (2005), 41–43.

(with A. Rudvalis) A design and a geometry for the group $F_{22}$, *Designs, Codes, Cryptography* 44 (2007), 11–14; doi: 10.1007/s10623-007-9041-1

(with Pablo Spiga) Min-wise independent families with respect to any linear order, *Communications in Algebra* 35 (2007), 3026–3033; doi: 10.1080/00927870701404812

[252] (with Ross Applegate) Orbits on n-tuples, *Communications in Algebra* 37 (2009), 269–275; doi: 10.1080/00927870802243739
