# MAS115 Calculus I 2007-2008 

Problem sheet for exercise class 1

- Make sure you attend the excercise class that you have been assigned to!
- The instructor will present the starred problems in class.
- You should then work on the other problems on your own.
- The instructor and helper will be available for questions.
- Solutions will be available online by Friday.
$\left.{ }^{*}\right)$ Problem 1: Determine the set of all real numbers $x$ (i.e. $x \in \mathbb{R}$ ) that satisfy

$$
x^{2}-3 x-4<0
$$

(a) by direct computation, and
(b) by plotting the graph of $y=x^{2}-3 x-4$.

Hint: compute the zeros of $x^{2}-3 x-4$.
Problem 2: Determine the set of all real numbers $x$ (i.e. $x \in \mathbb{R}$ ) that satisfy

$$
|2 x-1|+|4 x+1|<3
$$

(a) by direct computation, and
(b) by plotting the graph.

Problem 3: Determine the set of all real numbers $x$ (i.e. $x \in \mathbb{R}$ ) that satisfy

$$
\sqrt{1-x^{2}} \leq-x
$$

(a) by direct computation, and
(b) by plotting the graphs of $y=-x$ and $y=\sqrt{1-x^{2}}$.

Problem 4: Prove that for all positive real numbers $x$ and $y$ (i.e. $x, y \in \mathbb{R}^{+}$),

$$
\frac{2}{\frac{1}{x}+\frac{1}{y}} \leq \sqrt{x y}
$$

(a) by direct proof, and
(b) by using the geometric-arithmetic inequality.

Extra: Prove that for all real numbers $x$ and $y$ (i.e. $x, y \in \mathbb{R}$ )

$$
\| x|-|y||=|x+y|+|x-y|-|x|-|y| .
$$
